YOUR REQUIRMENTS

Working as an Architect?

Create Automation specialises in working as a partnership with architects, on commercial projects and smart home developments. Whatever design method is chosen, we like to get involved at the earliest stage of planning, to provide an efficient, successful design system incorporating all aspects of Home Automation into any property.

Renovating your property?

At Create Automation we pride ourselves in making all your technological needs, become a reality. We provide a free, no obligation consultation service to design your home specifically to your requirements, and make the technology revolve around you. We can help you identify the system or products, which best meet your requirements and plan your project from start to finish, to deliver a system that is reliable, practical and enhances your home.

The Complete Audio Experience

Multi room audio systems are becoming common place in many new build and renovation projects. Multi room music systems allow music to be easily accessed in any room, with different music playable in different rooms of the house. High quality sound is usually delivered via discreet in ceiling speakers.

Create Automation offer a variety of music systems from manufactures such as Sonos, Nuvo and System line. All these systems are easy to use and can be controlled by either iPhone, iPad or android phone. Music can either be stored on a local hard drive or streamed directly into your house on demand, with a vast music collection easily accessible from online services such as Napster and Spotify.

Setting The Scene In Your Home

Mood lighting offers sophisticated control of your homes lighting circuits at the touch of a button. Lighting control Keypad buttons can be engraved with scenes of your choice and are available in a range of stylish finishes to match your decor. As well as making lighting control simple and intuitive, these systems offer significant energy saving and safety benefits over traditional lighting switches. A lighting circuit can be reduced to 80% with no visible difference to the naked eye, cutting costs and energy consumption. Another benefit is that of safety; no mains voltage is present at the keypad itself adding extra peace of mind for parents with young children.

Maintaining The Perfect Temperature

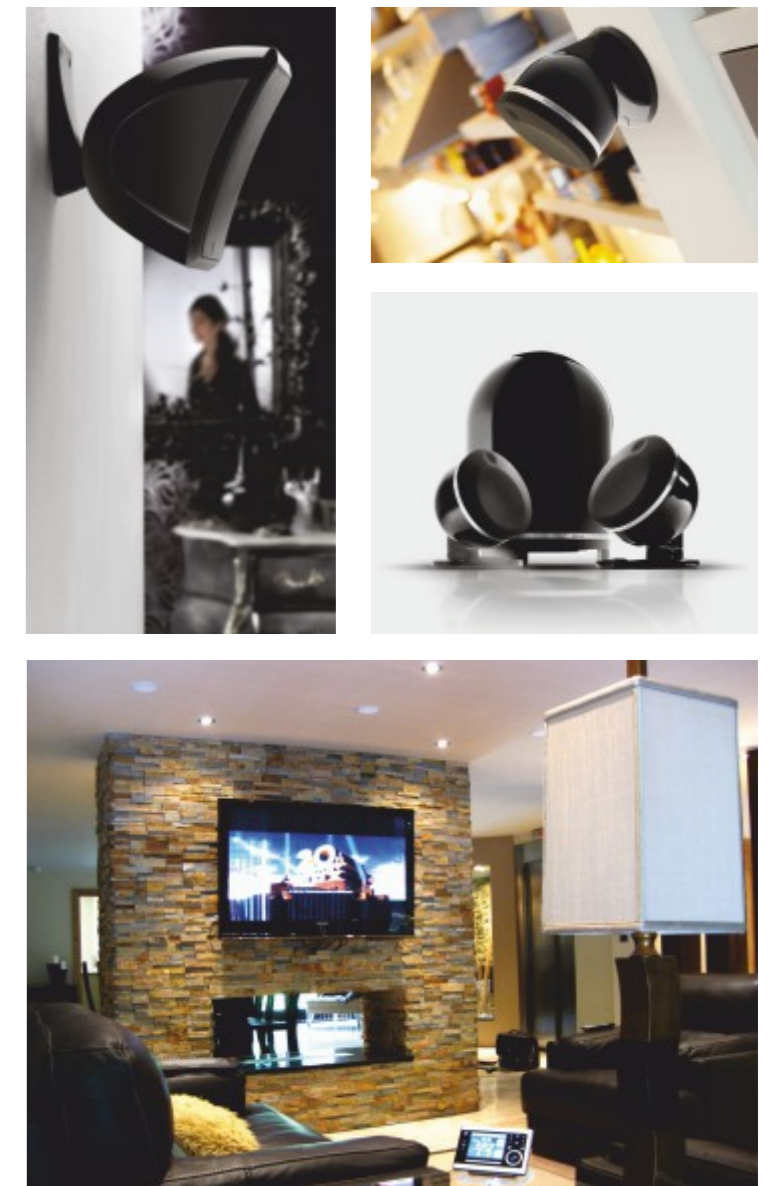

Heating controls now form part of the latest building regulations and can help save energy and costs. Systems such as the Heatmiser can be incorporated into our Home Automation systems. You can quickly and easily access key information regarding your heating system using an on screen menu system displayed on a television, iPhone or iPad. A system such as the UH1 can control up to 8 zones, including under floor heating and traditional radiators. Heating controls can also be automated, to automatically turn off when you leave for work, and then turn on again for your arrival home. Not only is this good for the environment, its saving you time and money.

A Breathtaking Cinema Experience

Home cinema systems are now hugely popular in the modern homes, bringing the latest high definition movies to life and delivering a truly cinematic experience in the comfort of your home. Home cinema systems can be seamlessly integrated into a Lounge, with discreet ceiling or in wall speakers and all equipment and wires hidden in a cupboard. These systems can be controlled either with a hand held remote control or by using an iPhone or iPad.

Bringing Automation To Your Home

Home Automation provides effortless control over your house with one central remote. The entire home can be connected into this one system, allowing the opening of garage doors or gates to be done from inside the house. Other functions include the automated opening and closing of curtains/blinds, which can be synced with other automation in the house.

Another aspect that makes Home Automation so desirable is the simulation function. This function replicates home activity such as closing curtains or shutting gates, even when no one is home. This function provides reassurance for homeowners when going away and improves security. This function can also be set to randomise, making a realistic imitation of home life.

Looking After Your House

Security Cameras are highly sophisticated digital network cameras, connected to a built in web server allowing for indoor and outdoor use. By simply connecting security cameras to the home network, you can view live footage anywhere in the world by entering the IP address in the web browser. Functions of IP cameras vary, allowing you to specify between base fixed IP cameras or full pan/tilt/zoom cameras with a night mode function, motion detection, or alarm outputs. These can be combined to create a comprehensive security system, custom designed as a solution for large commercial outlets and personal residences.

Connecting Your Home

A home network is now a necessity in any modern day house, it allows wireless connectivity from anywhere in the home, as well as linking all devices together including Smart Tv's, Blu Ray Players, Computers, Laptops, Smart Phones and CCTV systems. Create Automation plan and install comprehensive Home Automation systems, and with our expert knowledge your home network can supply broadband, telephone,

These networks are fundamental when a property is being built or under re-development, making the home flexible to the modern home lifestyle. Professional installation can integrate a network into any home with architecturally aesthetic fixtures blending into any living environment, with a variety of sympathetic finishes available. including white, chrome and brushed steel.
